

Small pdf reader for windows 10

Continue

Popular Windows Phone RSS reader Wonder Reader has been updated to support Windows Phone 8. The latest release includes improvements to support wide Live Tiles, WXGA and 720p resolutions, as well as voice commands. Not only that, but the app is currently on offer at \$1.29 to celebrate the launch of Windows Phone 8 and Wonder Reader's second birthday. It's a highly rated app, which we reviewed back in 2010. Version 2 was released for Mango, so it's good to see the developer continuing to support Windows Phone with further releases being published on the Store. As well as the new screen resolution and Live Tile size support, Wonder Reader also sports high quality images and copy link to clipboard functionality. You can download Wonder Reader from the Windows Phone Store for the discounted price of \$1.29 (£0.99). Edge Dev Hero 2020 Newfeature (image credit: Daniel Rubino / Windows Central) Microsoft recently started testing buy now, pay later functionality in its Edge browser. The feature drew criticism from many for being built directly into the browser. Over half of polled Windows Central readers believe that Edge should not have shopping features built in. Microsoft Edge Dev recently gained a buy now, pay later (BNPL) feature that allows people to spread online purchases across several installments. The announcement of the integration caused a discussion on the web about what should be built into a browser. While some were frustrated with such a feature being built into Edge, others defended the move, often citing that the tool is optional. Over the weekend, we ran a poll asking if Edge should have shopping features built in. Over half (55%) of polled participants believe that Edge should not have any shopping features built directly into the browser. Several pointed to extensions as alternatives that allow shoppers to add similar tools. Labor Day sales highlights - Laptops, PC, monitors, and moreA smaller but sizable group of voters said that shopping features are fine as long as they're optional. Over 32% of participants chose this option. Just over 7% of voters believe that only features that save money should be built into the browser. Buy now, pay later allows people to spread payments across installments, but it does not reduce the cost of anything purchased. In contrast, Edge has a coupon tool that applies discount codes in a similar way to Honey. Lastly, 5.05% of polled participants believe that shopping features should be built into Edge. Svenj explained it the comment section of our poll post that they would prefer these types of features be available through extensions. I'd prefer it be implemented as an extension. Yes, I can turn it off, which I did. Which also turned off the coupon thing, which I also didn't like. It consistently dropped down covering up functions I was needing to get to. It was just annoying. I do understand making it off by default, or making it an extension, would then require advertising to let people know it exists, and convince them to turn it on. Note this is not a MS BNPL function. It is a third party function that presumably paid MS to stick it in the browser. That precedent is concerning, and potentially 'anti-competitive.' PayPal has a BNPL option as well. Why is that not built in, and does this harm PayPal by MS having this other one built in? While the majority of voters dislike shopping features being built into Edge, those that shared comments had a range of opinions. "That loan thing was advertising and I find that unacceptable." Explained Culex316. "However, the money-saving coupon feature is very welcome and awesome and I don't mind having that, but there should also be a prompt to inform the user that they can always disable it in the settings if need be." Cornelius Hardy focused on the fact that BNPL is optional in the comments section of our poll piece. I like them. I have the capital one extension and the Microsoft both which scan for coupon codes and have saved me tons of money so far. I've also used Klarna a few times before it even came to Edge. Nice to have it within easy access. Not sure what people are complaining about. You aren't forced to use it. Turn it off and it's like it was never there. For people that shop a lot especially during the holiday season I think this was a good idea and at the right time. A comment by "A B10" says, "stop all the griping, the feature can actually save you money and is useful. To all the whiners, it can be turned off. No big deal. Learn to relax. ☺" Over the weekend, we also ran an editorial titled "Microsoft Edge integrating buy now, pay later is predatory and disappointing." That piece drew several more comments defending Microsoft integrating BNPL into Edge. Make sure to check out that piece to see more perspectives on the situation as it continues to develop. Getting a good PDF viewer is easier than ever. Modern web browsers like Google Chrome, Mozilla Firefox, and Microsoft Edge can all read PDFs out of the box, so you may not even need one. But if you want a separate PDF viewer, perhaps for the advanced PDF features some documents require, we have some options. Google Chrome, Mozilla Firefox, or Microsoft Edge: Your Browser Handles the Basics Modern web browsers come with integrated PDF readers. You don't even need to install a separate PDF viewer anymore. Browser PDF readers work well, offering a speedy experience without additional load times and clutter. And, since your browser updates its integrated PDF reader automatically, it's always up-to-date with the latest security fixes. Google Chrome, Mozilla Firefox, and Microsoft Edge all come with integrated PDF readers. When you find a PDF on the web, click it and it will open directly in your web browser. PDFs are treated just like other web pages. When you're done, you can just hit the back button and keep browsing. You can make PDF files on your hard drive open in your preferred web browser, too. For example, let's say you want to open PDF files in Chrome. Just locate a .PDF file on your computer, right-click it, and select Open With > Choose Another App. Select Google Chrome, Mozilla Firefox, or Microsoft Edge in the list, check the "Always use this app to open .pdf files" option, and click "OK". The browser you chose will become your default PDF reader and will be used when you double-click a PDF file. If you don't see your preferred browser here, scroll down in the list, select More Apps > Look For Another App on This PC, and point Windows at the browser's .exe file in your Program Files folder. Sumatra PDF: A Speedy, Lightweight PDF Viewer Outside Your Browser If you do want a separate PDF reading program, we recommend Sumatra PDF. Sumatra is an open-source PDF viewer that also has support for other types of documents, including ePub and Mobi eBooks, XPS documents, and CBZ and CBR comic books. Sumatra PDF is small, lightweight, and fast. It works entirely outside your browser, so PDFs will open in a separate window. It's even available as a portable application, so you can take it with you and use it on any PC, even if you can't install software on that PC. There's no real advantage to using this application over your web browser unless you just like having a separate application. It should work just as well as your browser, with no big additional features. But, if you'd rather see PDFs in a separate window, Sumatra PDF is your best bet. Adobe Acrobat Reader DC: Slower But Supports Advanced PDF Features We recommend you stick with your web browser or a lightweight PDF reader like Sumatra PDF most of the time. Most PDF documents you'll come across are not complicated, and they work very well—and very quickly—in these simplified PDF readers. But, every now and then, you may come across a PDF document that needs additional features. For example, we've seen official government PDFs that include complex, scripted fillable forms that don't work in the average PDF viewer. PDF documents can also contain 3D models and other rich media objects, and those just won't work in your browser or Sumatra. If you come across a PDF that doesn't work properly in your typical PDF reader, we recommend Adobe's official Adobe Acrobat Reader DC application. It's unnecessarily heavy compared to lightweight PDF alternatives, but it will be able to handle all the obscure PDF features you're likely to encounter. If you find yourself needing to open PDFs that require advanced features regularly, you should probably just stick with Adobe Acrobat Reader DC as your main PDF viewer, as much as it pains us to say. Adobe Acrobat Reader has historically had regular security holes, likely due to all the additional features it needs to support. Modern versions of Adobe Acrobat Reader DC are automatically kept up-to-date with the latest security patches. Don't worry about enabling automatic updates—automatic updates are enabled by default, and you can't normally disable them. Warning: The latest versions of Adobe Acrobat reader automatically prompt you to install a Chrome extension that reports information about your web browsing to Adobe. When you're prompted to install an Adobe Acrobat extension in Chrome, click "Remove from Chrome". There's no good reason to activate this extension.
